Dear Sir ,

You have your Colorado Water Well Permit, but where is the best place to drill? We can help you avoid drilling a dry hole.

Drilling a well can be very expensive. Accurate Well Water Sourcing, can make your drilling expenses as cost effective as possible. We help you find the right location the *first* time! We do this through the same science used in oil-drilling exploration, but applied to water aquifers at an affordable price.

Our technology is designed to save you thousands of dollars in well drilling by helping you locate WHERE the water is, HOW DEEP it is and HOW MUCH (in Gallons-Per-Minute) there is on your property. The scientific report you receive places *you* in charge so you will not be at the mercy of other's opinions and guessing as to location, depth and volume of water.

For more information about our company and the process we use, we invite you to visit our website at: www.AccurateWellWaterSourcing.com. Take a moment to check out our scientific method, based on electro-kinetic-seismology. We are happy to talk to you further and answer any questions you may have.

Initial consultations are always FREE.

We look forward to being an asset to you.

Louis Day
Owner & EKS Technician
